SOTRAS

SOTRAS è una società nata 40 anni fa. Sin dall'inizio la SOTRAS ha cercato di arrivare alla perfezione nella qualità dei suoi prodotti e questo l'ha portata ad affermarsi come uno dei maggiori protagonisti nel settore delle filtrazione industriale.

Grazie alle sue strategie e investimenti, oggi la SOTRAS offre una delle più complete gamme di ricambi di alta qualità per compressori e pompe a vuoto.

SOTRAS is an italian firm which was born 40 years ago. Since then, SOTRAS has been striving for perfection in the quality of its product establishing itself as one of the main players in the industrial filtration industry.

Thanks to SOTRAS corporate strategy and investments, today SOTRAS is able to offer one of the most complete range of high-quality spare parts for compressors and vacuum pumps.

SOTRAS

La SOTRAS fornisce filtri industriali di alta qualità e si è specializzata nella produzione dei filtri per compressori ed aria compressa. Ci auguriamo che questo catalogo sia un valido supporto per le vostre richieste relative al settore dei compressori e pompe a vuoto.

Il prodotto SOTRAS viene fornito principalmente come impiego in primo montaggio ed in conseguenza anche i prodotti che formiamo come after-mercato vengono realizzati con le medesime caratteristiche. I dati contenuti in questo catalogo sono stati compilati con la massima cura, tuttavia non possono essere considerati vincolanti e i riferimenti originali sono riportati solo a titolo d'informazione.

Nel caso di dubbi o di mancanze di informazioni vi preghiamo di rivolgervi direttamente al nostro servizio clientela.

La SOTRAS, grazie alle esperienze acquisite, ed una conoscenza del mercato nel settore dei ricambi ha creato nel tempo un magazzino capace di soddisfare le più svariate richieste sia dal punto di vista qualitativo che dal punto di vista logistico.

SOTRAS supplies high quality industrial filters and is specialised in manufacturing filters for compressors and compressed air applications.

SOTRAS produces original equipment directly for many compressor manufacturers (OEM's) around the world, and as a result the after market products are made to the same exacting standards of components, quality, control, and testing as those supplied to the OEM's.

We are very pleased to provide you with this catalogue containing technical and general information so as to enable you to quickly resolve queries for filtration relating to the compressed air industry. Whilst the contents has been produced with the greatest of care, it cannot be considered to be binding or guaranteed and the original references are to be intended only for information purposes.

With a view to continuous product improvement, SOTRAS reserves the right to make changes without prior notice. Should you need any further assistance, information or support please do not hesitate to contact our customer service department on sales@sotras.com

Thanks to its experience gained from the many years dealing with filtration in the compressed air industry, SOTRAS has developed a flexible product handling system allowing the logistic department to satisfy requirements in terms of variety, quality and speed.

AIR-OIL SEPARATORS

During the last century compressed air became associated with many industrial applications and compressor manufacturers focused their attention on rotary screw and vane compressor whose compression systems use lubricating oil as a coolant. Hence the necessity of using air/oil separators.

SOTRAS designs and manufactures separators specifically for installation in rotary screw and rotary vane compressors and they are available in vertical, horizontal and spin on configurations.

Their purpose is to separate the oil droplets from the compressed air, thereby producing cleaner air and allowing the oil to be scavenged and re-circulated in the compressor.

SOTRAS separators are manufactured to satisfy OEM's needs in terms of:

- Physical principle of air/oil separation
- Element dimensions according to the compressor's performance and tank dimensions.
- Oil consumption to ensure a correct functional performance
- Use of high grade filtration and separation media to ensure the best quality of clean air needed for industrial applications.

Additionally it is very important to highlight that SOTRAS separators can be used with all types of oils, whether standard, mineral based, synthetic or partially synthetic.

In order to decide which is the best separator to be used for a specific compressor, OEMs have to consider what level of separation needs to be achieved, in other words to target the minimum of parts per million of residual oil content required.

Then a technical solution is needed in order to reduce the oil concentration in the air.

Often OEMs need to consider a pre-separation system, which will reduce the PPM and increase the life of the air/oil separator.

SOTRAS

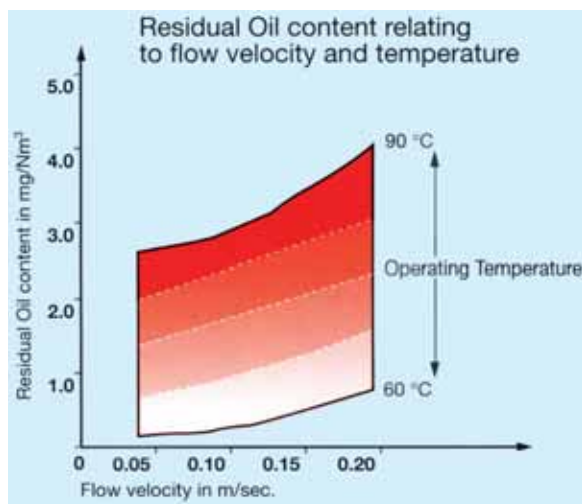

SEPARATORI ARIA/OLIO

Nel secolo scorso l'aria compressa è entrata a far parte di molte applicazioni industriali ed i costruttori di compressori hanno focalizzato l'attenzione sui compressori a vite e compressori rotativi con sistemi di compressione che utilizzano olio lubrificante come refrigerante. Da qui la necessità di utilizzare separatori aria/olio.

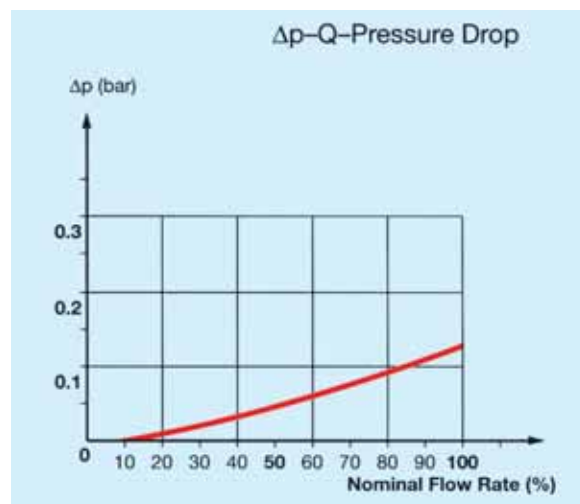

I filtri separatori SOTRAS sono specificamente progettati per l'installazione in compressori rotativi e compressori a vite e sono disponibili per applicazioni di tipo verticale, orizzontale o avvitabile

Il loro compito (scopo) è quello di separare le goccioline d'olio dall'aria compressa, producendo in questo modo aria più pulita, e di permettere all'olio di essere ripescato e rimesso in circolazione nel compressore.

Graph 1 / Grafico 1

Graph 2 / Grafico 2

I separatori SOTRAS sono prodotti in modo da rispondere alle esigenze dei costruttori nei seguenti termini :

- Principio fisico di separazione aria/olio
- Dimensioni del prodotto conformi alle prestazioni del compressore e alle dimensioni del serbatoio.
- Minimo consumo d'olio che assicuri una corretta prestazione funzionale
- Utilizzo di media filtrante ad alto grado di filtrazione e separazione per assicurare la miglior qualità dell'aria necessaria per le applicazioni industriali.

Inoltre è molto importante sottolineare che i separatori SOTRAS possono essere usati con tutti i tipi di olio, standard, a base minerale, sintetico o parzialmente sintetico.

Per decidere quale è il separatore migliore da utilizzare in uno specifico compressore, i costruttori devono considerare quale livello di separazione sia necessario raggiungere, in altre parole individuare la massima quantità di parti per milione di residuo di olio tollerata.

Quindi è necessaria una soluzione tecnica per ridurre la concentrazione di olio nell'aria.

Spesso i costruttori devono considerare un sistema di pre separazione, che ridurrà le ppm e allungherà la vita del separatore aria/olio.

SOTRAS

CONSTRUCTION AND SEPARATION

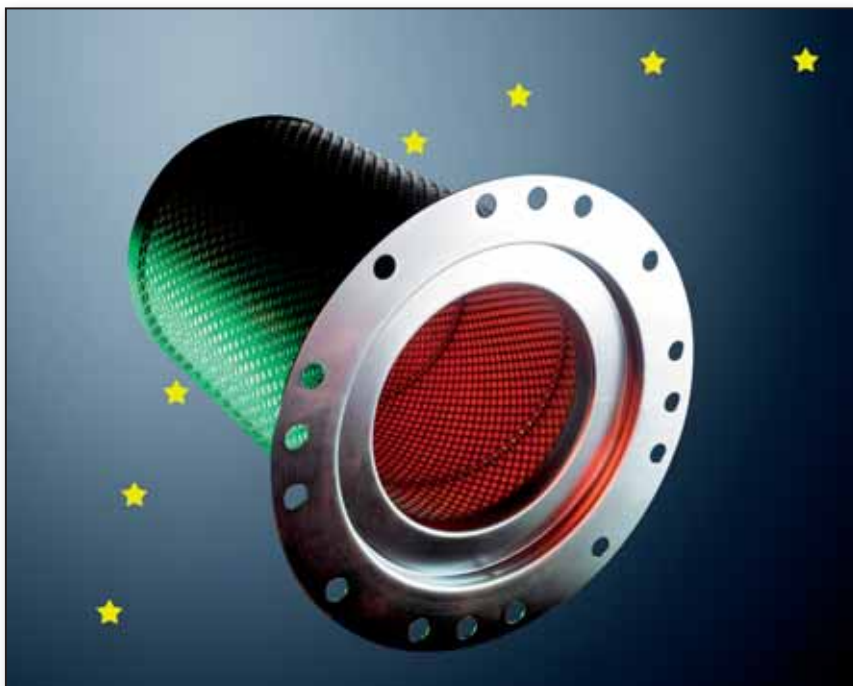

Corrosive resistant materials are used in the construction of the air/ oil separators. Careful welding procedures and the use of the latest twin pack adhesive ensure that the element has high mechanical strength and can endure operating temperature up to 120°C.

Normally, the air and oil mixture passes from the outside to the inside of the separator and the coalescing effect is carried out through a multi stage separation process resulting in the recovery of the oil and producing clean air.

PRESSURE DROP - EFFICIENCY AND PERFORMANCE

At a nominal working pressure of 7 bar, the pressure drop on a new element varies between approximately 0.15 and 0.25 bar. At other working pressures, the pressure drop is proportional to the air velocity across the separator (graph 2)

By using our separators, the oil carryover after separation is limited to about 1 to 3 ppm. The life of the separator depends on many factors: the designs and regular maintenance of the compressor, clean environment, working temperature, quality of the air and oil filters. To ensure maximum separator efficiency, the joints must create a perfect seal. Experience has shown that through correct installation and also using the correct type of oil, SOTRAS separators can have a life expectancy of many thousands of hours.

SOTRAS

COSTRUZIONE E SEPARAZIONE

I materiali utilizzati nella costruzione dei separatori sono resistenti alla corrosione. Un attento processo di saldatura e l'utilizzo di colla twin pack (bi-componente) di ultima generazione assicurano al filtro un'elevata resistenza meccanica e gli consentono di sopportare temperature di esercizio fino a 120°.

Normalmente la miscela di aria e olio passa dall'esterno all'interno del separatore e l'effetto coalescente si ottiene attraverso un processo di separazione a più stadi che porta al recupero dell'olio e alla produzione di aria pulita.

PERDITA DI CARICO - EFFICIENZA E PRESTAZIONI

Ad una pressione di esercizio di 7 bar, la perdita di carico di un elemento filtrante nuovo varia tra 0.15 e 0.25 Bar circa. Ad altre pressioni di esercizio, la perdita di carico è proporzionale alla velocità del passaggio dell'aria attraverso il separatore (grafico 2)

Usando i nostri separatori, il residuo di olio dopo la separazione è ridotto a circa 1 - 3 ppm. La durata del separatore dipende da molti fattori: la concezione del compressore e la sua regolare manutenzione, un ambiente pulito, la temperatura di esercizio, la qualità dei filtri aria e olio. Per assicurare la massima efficienza possibile del separatore, le guarnizioni devono consentire una tenuta perfetta. L'esperienza ha dimostrato che con una corretta installazione e anche con l'utilizzo del corretto tipo di olio, i separatori SOTRAS possono avere un'aspettativa di durata di molte migliaia di ore.

TYPE	Pressure drop at nominal flow rate (bar)/Perdita di pressione alla portata nominale	GENERAL SPECIFICATIONS/SPECIFICHE GENERALI
single wrapped/ Singolo avvolgimento	0,16	Low production costs, good performance and long life span Bassi costi di produzione, buone performance e lunga vita lavorativa
double wrapped/ doppio avvolgimento	0,18	Excellent performance on small dimensions and long life span Eccellenti performance con dimensioni ridotte e lunga vita lavorativa
pleated/piegheggiato	0,15	Low pressure drop Bassa perdita di carico
pleated+wrapped/ piegheggiato + avvolto	0,17	Low pressure drop and excellent separation levels Bassa perdita di carico ed eccellente livello di separazione
with pre-separation fleece/con panno pre-separazione	0,2	For applications showing high oil percentage before separation or under particular environmental conditions Per applicazioni che mostrano alte percentuali di olio prima della separazione o sotto particolari condizioni ambientali
spin on	0,25	For easy maintenance and small flow rates Per facili manutenzioni e bassi flow rate

SPIN-ON OIL FILTERS

Thanks to its experience in the hydraulic sector, SOTRAS has developed a range of oil filters, especially suitable for screw and vane compressor applications, "bearing in mind," that these filters will have to endure sudden changes and extreme limits in pressure and temperature. The oil filters that SOTRAS offers are usually of the spin-on type and can be provided with a by pass valve, if it is not already to be found on the heads or in the lubrication circuit. Generally the most commonly used filtering media is made of cellulose, however fibreglass and metallic mesh versions are available on request. Every batch undergoes stringent laboratory performance tests in terms of resistance to cyclic and maximum working pressure.

FILTRI OLIO AVVITABILI

Grazie alla propria esperienza nel settore idraulico, la SOTRAS ha sviluppato una gamma di filtri olio, particolarmente adatti per un utilizzo su compressori a vite e compressori rotativi, tenendo in considerazione che questi filtri devono resistere a improvvisi cambi e a livelli estremi di pressione e temperatura. I filtri olio che la SOTRAS offre sono generalmente di tipo avvitabile e possono essere forniti con valvola by pass, nel caso non sia già incorporata nelle teste o nel circuito di lubrificazione. Generalmente il media filtrante più utilizzato è in cellulosa, tuttavia sono disponibili su richiesta versioni in fibra di vetro e rete metallica. Ogni lotto viene sottoposto a severi esami di laboratorio per testarne la resistenza alla pressione a cicli e alla pressione di massimo esercizio.

DEMISTERS

The media used in our separators enables us to obtain excellent air/oil separation rates up to 1-3 mg/m³. All oil separators are manufactured using materials to withstand high pressures and temperatures and to minimise moisture induced deterioration.

In order to achieve the best possible separation efficiency and long working life of the element it is essential that regular maintenance procedures are followed and joints are applied correctly, as well as the use of good quality air and oil filters.

SEPARATORI PER POMPE A VUOTO

Il media filtrante usato nei nostri separatori ci permette di ottenere un eccellente livello di separazione aria/olio che arriva fino a 1-3mg/m³. Tutti i separatori vengono prodotti usando materiali che sopportino alte pressioni e temperature e che siano in grado di ridurre al minimo il deterioramento provocato dal passaggio dell'aerosol. Per ottenere la miglior capacità di separazione e assicurare una lunga durata dell'elemento filtrante è essenziale che vengano seguite regolari procedure di manutenzione, che le guarnizioni vengano applicate correttamente e che siano utilizzati filtri aria e olio di buona qualità

VACUUM AIR FILTERS

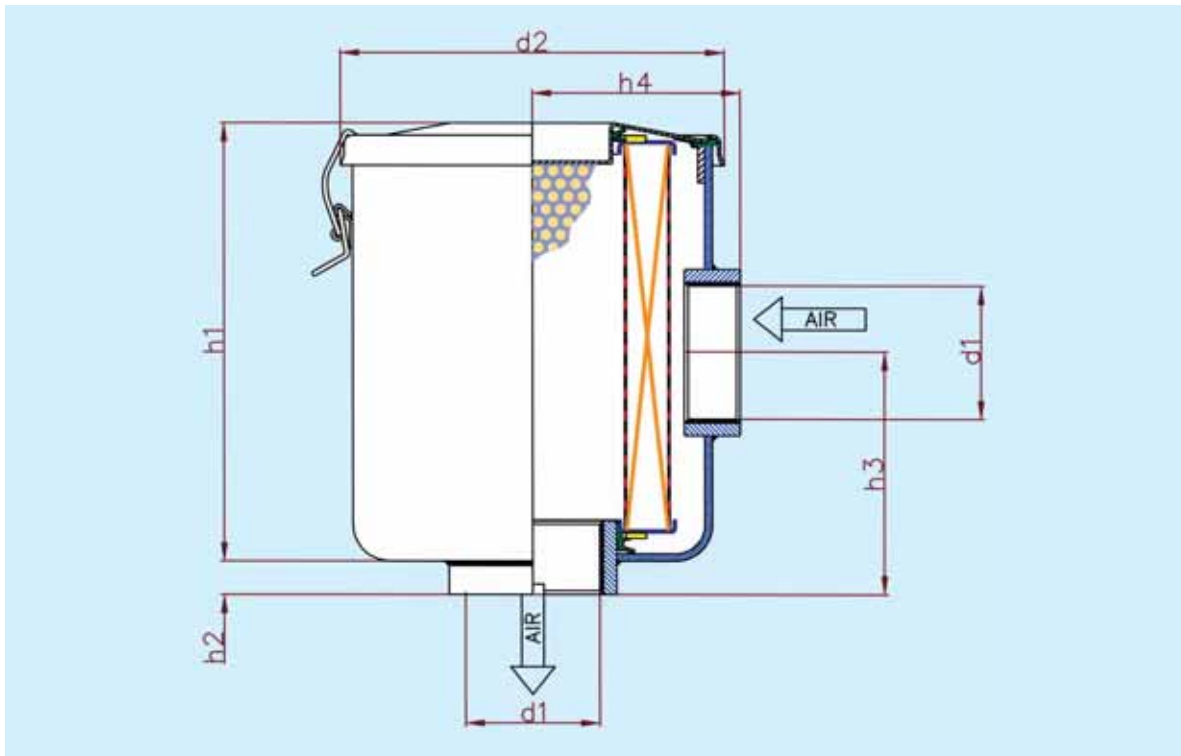

SOTRAS offers a wide range of filters to suit most requirements in this field and the elements are usually interchangeable with those produced by other leading manufacturers. Steel housings are treated with a special protective coating thereby guaranteeing a longer durability. They also undergo thorough tests to ensure the seals withstand high vacuum levels. The elements have high dust retention and are available with paper media (having a normal filtration rate of 5 microns) as well as glassfibre media for special applications.

FILTRI ARIA PER POMPE A VUOTO

La SOTRAS offre un'ampia gamma di filtri per pompe a vuoto in grado di soddisfare la maggior parte delle richieste del settore. I nostri articoli sono generalmente intercambiabili con quelli prodotti da altri importanti produttori leader del settore . I contenitori di acciaio sono trattati con una speciale vernice protettiva che ne garantisce una maggiore durata. Inoltre vengono sottoposti a test approfonditi per accertare la tenuta ad alti livelli di vuoto. Gli elementi filtranti permettono di raggiungere alti livelli di ritenzione polvere e sono disponibili con media filtrante in carta (con un grado di filtrazione normale di 5 micron) e in fibra per applicazioni speciali.

PRE FILTERS "SERIE 1"

Grossolana filtrazione
rimuove sporcizia
il flusso dell'aria
è da fuori a dentro

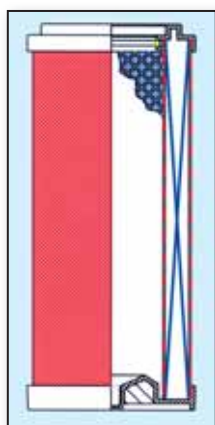

Coarse filtration and
dust removal
Airflow through filter
element-out to in

FINE FILTERS "SERIE 2"

Filtrazione Generale rimuove
particelle sotto lo 0,1microm.
Massimo residuo di olio sotto
lo 0.5 PPM. Il flusso dell'aria è
da dentro a fuori

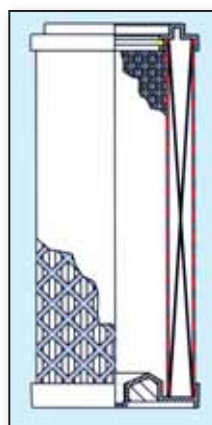

General-purpose protection.
Particle removal down to 0,1
micron. Maximum residual oil
content down to 0,5 PPM. Air
flow through filter element-out
to in

MICRO FILTERS "SERIE 3"

Filtrazione alta efficienza
rimuove particelle sotto lo
0,01micron.
Massimo residuo di olio
sotto lo 0.01 PPM. Il flusso
dell'aria è da dentro a
fuori

High efficiency filtration.
Particle removal down to
0,01 micron.
Maximum residual oil
content down to 0,01
PPM. Airflow through filter
element-out to in

ACTIVED CARBON FILTERS "SERIE 4"

Elimina odori e vapori di olio.
rimuove particelle sotto lo
0,01micron.
Massimo residuo di olio sotto
lo 0.005 PPM. Il flusso dell'aria
è da dentro a fuori

Oil vapour and odour removal.
Particle removal below 0,01
micron.
Maximum residual oil content
down to 0,005 PPM
Air flow through filter
element-out to in

RICHIESTE SPECIALI

I prodotti di dimensioni identificabili attraverso le nostre informazioni precedenti o mancanti di codice e APPLICAZIONI, possono essere richiesti attraverso il modulo tramite il nostro sito internet www.sotras.com o tramite fax con il modulo a pagina seguente.

Sarà cura del nostro ufficio tecnico/commerciale soddisfare la vostra richiesta.

SPECIAL ENQUIRES

If you cannot find the information or part numbers you require in this or any previous Sotras publication, please try our web site on www.sotras.com and complete the form which is to be found under the product/technical section.

Alternatively, you can complete the form on page 265 of this catalogue and fax it to +39 011.262.41.41.

Otherwise, you can contact our customers service by e-mail on sales@sotras.com who will be pleased to reply as soon as possible.

GARANZIA E SOSTITUZIONE DEI PRODOTTI

La Sotras garantisce i filtri di sua produzione esenti da ogni difetto sia nel materiale sia nella costruzione, sempre che gli stessi siano installati in modo appropriato e sostituiti secondo le indicazioni del costruttore.

La Sotras sostituirà i propri filtri riscontrati difettosi; in questo caso vi raccomandiamo di compilare accuratamente il modulo "Rapporto di contestazione", a pag. 269 del catalogo e di inviarlo al numero di fax 011.262.41.41, per una risposta ed una soluzione più rapida del problema riscontrato.

Non saranno comunque rimborsate eventuali spese per la sostituzione e qualsiasi altra spesa accessoria connessa.

WARRANTY AND RETURN POLICY

We guarantee that filters produced by Sotras are free from defects either in materials or construction, always provided that the machinery is maintained in accordance with manufacturers' recommendations and filters are correctly installed and changed.

Sotras will replace any item found to be defective, in this case we recommended that the form "Dissatisfaction report" (page 270 of our catalogue) is duly filled in and faxed to the number +39 011.262.41.41 in order to get a quick answer and solution to the issue.

Sotras will not be held responsible for any other replacement or contingencies or consequential loss.
